MENTORING

I have a sincere commitment to advocate for diversity, equity, and inclusion. Specifically, throughout my academic and professional career, my personal goal has been to promote awareness of diverse groups, and provide guidance and support for individuals with diverse backgrounds and life experiences. As a result of my active efforts to include minorities in academic and research-related fields, my laboratory demographics have included Women, Asians, Latinos, African-Americans, Native-Americans, LGBT and gender non-conforming students – all working side-by-side in a welcoming atmosphere that strengthens mutual respect and teamwork. Collectively, this has provided an enriching environment that benefits problem-solving, nurtures good citizenship, and ultimately facilitates the advancement of scientific discovery. My commitment to diversity is reflected by the inclusion of undergraduate and graduate students, as well as postdoctoral fellows, as co-authors in my published work as an independent investigator. Importantly, after

getting research training in my lab, students frequently move on to research/medical/academic-related careers (including PhD, MD, PsyD, MA, and PharmD programs). For a list of trainees see the Table below (current lab members are in **bold**):
